

DATA ANALYST · BI ANALYST · DATA QUALITY

# Alexandr Sokolov

Data / BI Analyst · Data Quality · Master Data Management

I help business teams turn scattered operational data into reports, checks, and workflows they can trust. My strongest area is practical analytics: understanding the question, validating the data, reducing manual work, and explaining the result in plain language.

Data / BI Analyst with 3+ years of experience in FMCG and IT projects within the Heineken Russia environment. My work has mostly been around Power BI reporting, SQL/Python data checks, Excel/VBA automation, SAP ERP context, and master data quality.

I am closer to applied business analytics than research-heavy data science: I care about metrics people understand, logic that can be checked, and reports or scripts that make the team's work faster and calmer.

## What I Do Best

Build useful BI, not just nice charts

Remove repetitive manual work

- Translate vague business requests into clear metrics and report logic
- Build Power BI dashboards with DAX, Power Query, and Excel-based validation
- Support users after release, because a dashboard is only useful when people trust it

- Use Python, VBA, and SQL to automate recurring checks and reporting steps
- Make small tools that save hours, even when a full engineering solution is too heavy
- Document logic so another person can maintain the process later

### Make data quality visible

- Design master data checks, audit routines, and issue lists that business can understand
- Work with MDM, SAP ERP context, OpenMetadata, and data governance practices
- Prefer simple, repeatable controls over one-time heroic cleanup

## Selected Work Examples

### Master data audit automation

- Built recurring checks for master data consistency and reduced manual validation by about 15 hours/month.
- Result: fewer hidden data issues and a clearer process for discussing errors with business owners.

### Commercial BI dashboards

- Created Power BI dashboards for commercial, marketing, and logistics users from raw requirements to release.
- Result: teams had one shared place to track key metrics instead of scattered manual reports.

### BI migration validation

- Checked data correctness during BI stack migration by comparing model outputs, DWH layers, and business expectations.
- Result: helped catch mismatches before reports reached production users.

## Experience

### Senior Master Data & Data Management Specialist

**2024 - Present**

LLC X-Tech, subsidiary of LLC UBH

- Improved master data accuracy by **25%** through restructuring and automated audit routines.
- Automated recurring data and reporting processes with Python and VBA, saving about **15 hours/month** of manual work.
- Initiated a Local MDM and SAP ERP integration project and contributed as a domain expert.
- Supported and trained **50+ BI users**, helping reduce incidents caused by data misinterpretation.

### BI Analyst

**2022 - 2024**

LLC UBH, Heineken structure

- Built **5 Power BI dashboards** from scratch for commercial, marketing, and logistics teams.
- Reduced reporting preparation time by **30%** with Python scripts and improved ETL routines.
- Participated in BI stack migration and verified data correctness across models and DWH layers.

- Conducted UAT for new data models before production release, aligning outputs with business requirements.

## Target Roles

### Data Analyst

- Reporting, SQL, Python, business metrics
- Insight delivery for operational teams

### BI Analyst

- Power BI dashboards and semantic models
- DAX, Power Query, stakeholder enablement

### Data Quality / MDM Analyst

- Master data checks, audit routines, governance
- SAP ERP and MDM integration context

## How I Work

### I clarify before building

- I try to understand what decision a report should support before choosing visuals or formulas.
- If a metric is ambiguous, I would rather discuss it early than hide uncertainty in a polished dashboard.

### I care about maintainability

- I like simple logic, named steps, documented assumptions, and checks that can be repeated.
- My goal is not to be the only person who understands the report.

### I am building a stronger portfolio

- Current focus: public BI/analytics projects with clean README files, business questions, SQL/Python code, and screenshots.
- I prefer honest small projects over inflated descriptions I cannot defend in an interview.

## Technology

Power BI

DAX

Power Query

SQL

Python

Pandas

NumPy

Excel

VBA

SAP ERP

OpenMetadata

MDM

DBever

Docker

## Education & Development

### Saint Petersburg State University of Economics

2017 - 2022

Specialist degree, Economic and Legal Support of Economic Security

- Studied mathematical analysis, statistics, economics, law, and information security fundamentals.
- Completed military training at Khrulev Logistics Academy and received the rank of Sergeant.

Data Governance fundamentals

MDM workshops

Advanced Power BI visualization

SQL for data analysis

Python reporting automation
